

GLOBAL SOLAR ENERGY INDEX FACT SHEET

as of 9/30/21

A benchmark to track global companies that derive revenue from solar-related business operations, manufacturing, and production.

The Case for Global Solar Energy

Solar energy provides an abundant, sustainable, carbon neutral source of green power. Growing global demand for sustainable green energy solutions has created investment opportunity for companies in the solar energy supply chain.

- 1. Fastest Growth** - Solar is the fastest-growing source of new energy capacity with forecasts for \$4.2 trillion of new solar capacity investment through 2050.¹
- 2. Accelerating Capacity** - By 2040, solar is expected to be the largest source of global electrical capacity with over 35% more installed capacity than natural gas. Fossil fuels are expected to fall to just 24% of power generation by 2050 from the 62% level today.²
- 3. Low Cost Solution** - Solar energy is the cheapest new source of electricity in most major countries, and as costs continue to decline, solar operations will undercut fossil-fuel based power generation.
